## *Microcurrent*

Known as a non-invasive facelift, microcurrent facials introduce a low-grade electrical current delivered through a small machine onto the face muscles. The muscles contract and are meant to be trained – just like a gym workout – to lift and sculpt the face. Microcurrent is used to lift the eyebrows, define cheekbones, tighten and firm skin, and stimulate collagen growth. This non-invasive, gentle treatment produces effective and impressive results. The treatment improves facial muscle tone, reduces puffiness, increases cellular activity and tightens pores. The overall result is healthier, younger looking skin.

### **MICROCURRENT FACE LIFT**

Microcurrent technology delivers low- frequency electrical currents, retraining the muscles that gives your face a tightening lift. Like a mini facelift! Helps reverse fine lines, wrinkles and sagging by increasing collagen and elastin productivity. The skin is stronger, resilient, and has a youthful appearance. Includes all areas of face and neck. It is the workout that every skin needs.
